

The Structure

- Org contains Workspaces contains Channels
- **Public channel** — join yourself, anytime.
 - **Private channel** — a member must add you; invisible to everyone else.
 - **DM** — private, 1-to-1. **Group DM** — up to 20 people, private.

Messaging

- `@name` — mention a teammate (they're notified). Works in threads too.
- `[[Term]]` — link to a shared entity; click to see every mention across your channels.
- **Bold**, *italic*, ***bold-italic***, **highlight**, and links are recognized automatically as you type.
- Reply to a message to start a **thread** (one level deep — no replies-to-replies).
- **Enter** sends; **Shift+Enter** starts a new line in the same message.

You can edit your own message for **15 minutes** after sending. Edits are marked **(edited)**, with the full revision history visible to anyone in the conversation — nothing quietly changes.

Inline Tasks

Type anywhere in a message:

- [] Do the thing [owner::@name]

- Becomes a live, tickable checkbox — no AI, just recognized instantly.
- Tracked on the workspace **Task Dashboard**: "Tasks for Me" / "Tasks for Everyone Else."

AI Actions

- Summarize Channel** — catch up on recent activity fast.
- Extract Tasks** — pull a checklist from any thread.
- Catch Me Up** — cross-channel digest: mentions, action items, open questions, decisions.
- Semantic Search** — search by meaning, not exact words.
- Busy? You'll see `Queued (position N)` — normal, resolves shortly.

Presence

Online · Away · Offline — server-verified, not device-reported.

Notifications

You're notified on @mentions and invitations. Mark individually or all-as-read from the summary.

Your Account

- Change password anytime (needs current one) — signs out every *other* session, keeps this one.
- Update display name anytime, no approval needed.
- Appearance: Light / Dark / System.
- DMs auto-archive after 90 days idle by default (configurable, 0 = never) — never deleted; a new message brings one right back.
- No self-service signup or email password reset — ask an admin.

Joining & Leaving

- Discoverable workspaces: browse and self-join.
- Private workspaces/channels: an existing member adds you.
- Leave any channel, workspace, or org yourself, anytime.
- Own a workspace? Transfer ownership before you can leave it.

Roles at a Glance

ROLE	SCOPE
System Admin	Whole deployment
Org Admin	One organization
Workspace Owner	One workspace (unique)
Workspace Manager	One workspace
Member	Ordinary participant

Administering a workspace never grants access to its private message content — see the Administrator Guide, Ch. 10.

What's Not Here (Yet)

- **No** emoji reactions
- **No** file/image attachments
- **No** read receipts
- **No** message pinning

Glossary

- **Entity** — a shared `[[tag]]` for a person, project, or term. Editable metadata, relationships, and an AI "What we know" summary live on its detail page.
- **Thread** — flat replies on one message.
- **Semantic search** — meaning-based, not keyword.
- **Knowledge Explorer** — per-workspace panel showing trending entities and their subject-matter experts.
